Summaries data:	N/A
Effects of Acute Exposure:	Acute and sub acute toxicity trials have shown that spiramycin and metronidazole, separately and in combination, have low toxicity. <u>Ingestion:</u> Acute toxic effects would not be expected. Human patients have been administered doses of 2 g daily without ill effect. <u>Skin Contact:</u> There is no evidence from studies that metronidazole is either a skin irritant or a skin sensitising agent.
Effects of Chronic Exposure:	Chronic toxicity trials in two laboratory species have shown that a 2:1 mixture of spiramycin and metronidazole administered for one month at twice the recommended dose rate was well tolerated. No significant effects were seen in dogs treated daily for 4 weeks at doses up to 150 mg/kg/day. The study concluded that an overt toxicity with a specific target organ or target function cannot be attributed to the treatment. No teratogenicity in the laboratory animal species tested.
